

AMENDMENTS TO THE SPECIFICATION

Amendments to the Specification

Please replace the paragraph beginning on page 5, line 15, with the following amended paragraph:

As shown in FIG. 3, the vibration device according to the first embodiment of the present invention includes upper and lower cases 110 and 120 combined with each other, a magnetic force generating unit 130 formed at the center of the upper surface of the lower case 120, a vibrating unit including a magnet 140 and a weight 150, the a-magnet 140 for giving attractive or repulsive force by means of interaction with the magnetic flux generated by the magnetic force generating unit 130, a-the weight 150 making one body with the magnet 140 mounted thereto and increasing a vibrating amount with moving vertically by means of interaction between the magnetic force generating unit 130 and the magnet 140, elastic units 160 combined to the upper and lower surfaces of the weight 150 and extended below and above the weight 150 to elastically support the ~~weight 150~~vibrating unit, and a fixing member 170 for fixing ends 164 of the elastic units 160.
